

Technologies ready for commercialization

Name of technology / Variety	Specific characteristics of technology	Releasing Organization and Year	No. of farmers/animal benefitted (Approximate)
Decision Support System for Grapes	<p>To provide farm-specific advisory to the farmers, decision support systems (DSS) were developed for irrigation and nutrition management, pest and disease risk assessment and advisory for their management. It provides recommendations to the grower based on his/her crop data, farm data, and prevailing weather conditions that will support or assist grower's decision making capacity.</p> <p>Application programming interface (API) has been developed which processes inputs given by mobile or web application and gives outputs for use in the application. The access to this API is provided to licensed mobile or web application service providers who give access of DSS to farmers via his web/mobile application.</p>	ICAR-National Research Centre for Grapes, Pune 2018	Licences for 2500 farmer users were given to two service providers during 2018-19
